Japanese (Elementary)

Felipe Ramos da Silva

Senior Rust & Go Engineer | Real-Time Media & Distributed
Systems | AI Applications
Londrina, Paraná, Brasil

Resumo

I'm a Senior Software Engineer specializing in Rust, Go, distributed systems, and real-time media. Over the past five years, I've built backend services, streaming platforms, and cloud infrastructure for production media systems. My work includes low-latency networking, performance engineering, GPU-accelerated video processing, and distributed workloads. At Cosm, through Kake, I built a GPU-accelerated Rust web player for live sports production. It processes 8K fisheye footage, corrects lens distortion, delivers video in real time, and supports virtual-camera views that can follow players or the ball. Alongside my full-time role, I build AI applications through independent consulting, open source, and personal products. My current AI work focuses on agentic workflows, long-term memory, RAG systems, and developer tooling. Recent projects:

- RoleMiner — An AI-powered job discovery platform that uses persistent memory to learn job preferences, search and organize opportunities, and support the application workflow. <https://roleminer.app/>
- Kioku — An open-source memory layer for AI assistants, with semantic search, episodic memory, MCP integration, and long-term context across sessions. <https://github.com/felipemeriga/kioku>
- Artemis Network — An open-source Rust project exploring blockchain protocols, decentralized networking, and distributed systems. <https://github.com/felipemeriga/artemis-network>

Technologies: Rust • Go • Python • C++ • CUDA • AWS • Kubernetes • Docker • WebRTC • SRT • WebSockets • gRPC • PostgreSQL • LLM applications • RAG • MCP

GitHub: github.com/felipemeriga felipe.meriga@gmail.com

Experiência

Independent (Freelance / Consulting)
AI Solutions Engineer
novembro de 2025 - Present (11 meses)
Estados Unidos

Designing and building AI applications, developer tools, and backend services with Rust and Python.

→ Built RoleMiner, a job-discovery product that combines an LLM-based assistant, persistent user memory, structured job extraction, search, and application tracking.

<https://roleminer.app/>

→ Built Kioku, an open-source memory layer for AI assistants with semantic retrieval, episodic memory, MCP integration, and long-term context management.

<https://github.com/felipemeriga/kioku>

→ Designed RAG and agent workflows involving document retrieval, routing, context management, structured outputs, and evaluation.

→ Built backend services for AI applications with an emphasis on reliability, maintainability, and cloud deployment.

Technologies: Rust • Python • FastAPI • PostgreSQL • pgvector • Qdrant • Docker • AWS • LLMs • RAG • MCP • LangGraph

Kake

Software Engineer @ Cosm

maio de 2025 - Present (1 ano 5 meses)

Worked embedded in Cosm's engineering team building real-time media technology for immersive sports experiences.

→ Built a GPU-accelerated web player in Rust for live sports production, processing 8K fisheye video, correcting lens distortion, and delivering real-time playback.

→ Designed and implemented backend services and media pipelines in Rust and Go for low-latency video streaming, real-time processing, and distributed workloads.

→ Built cloud-native infrastructure on AWS using ECS, Lambda, S3, RDS, Docker, and Kubernetes to support large-scale production systems.

→ Integrated AI-powered capabilities into production workflows, including LLM-driven automation, RAG pipelines and intelligent backend services.

Technologies: Rust • Go • Python • TypeScript • AWS • Kubernetes • Docker • PostgreSQL • Redis • gRPC • WebRTC • SRT • RAG

X-Team

Software Engineer @ FOX

março de 2021 - maio de 2025 (4 anos 3 meses)

Remote

Software Engineer @ FOX | X-Team

Delivered backend infrastructure and real-time media systems for FOX's live-streaming platform.

→ Designed and maintained infrastructure, content-distribution, and monitoring systems for live-streaming workloads.

→ Built services in Go and Rust for real-time media processing, automation, and cloud infrastructure.

→ Used CPU profiling, heap analysis, tracing, and concurrency debugging to reduce CPU and memory use by more than 60%.

→ Reduced the validation loop for live-streaming data from six minutes to three seconds, improving operational feedback during production.

→ Implemented and maintained dynamic-ad-insertion workflows for live broadcasts.

Technologies: Go • Rust • TypeScript • React • AWS • Live Streaming • Distributed Systems

Tokenizer

Blockchain Software Engineer

março de 2020 - março de 2021 (1 ano 1 mês)

Remote

→ Developed Ethereum smart contracts and backend integrations for DeFi and DEX products.

→ Worked with Go, Rust, TypeScript, Solidity, Docker, Kubernetes, and AWS.

→ Built and integrated blockchain services using EVM tooling, RPC providers, and deployment workflows.

Technologies: Solidity • Ethereum • EVM • Go • Rust • TypeScript • Docker • Kubernetes • AWS

Accenture

Senior DevOps Engineer

setembro de 2019 - março de 2021 (1 ano 7 meses)

Dublin e Região

Worked in Accenture's R&D environment, evaluating emerging technologies and designing cloud architectures for internal applications.

→ Designed cloud and deployment architectures for internal products and technical initiatives.

→ Built prototypes and evaluated infrastructure approaches across AWS, containers, and microservices.

→ Documented technical findings and presented recommendations to internal engineering teams.

Technologies: Go • Python • TypeScript • React • AWS • Terraform • Kubernetes • Docker

IO-Shower

Software Developer

janeiro de 2018 - dezembro de 2019 (2 anos)

Londrina Area, Brazil

→ Led the technical development of an IoT product for remotely controlled showers, from embedded hardware through cloud services and mobile applications.

→ Designed the device, application, and cloud architecture, including AWS IoT services and backend APIs.

→ Worked with the business side to turn product requirements into commercial deployments.

Technologies: C++ • Java • TypeScript • React Native • Android • AWS • IoT

Tata Consultancy Services

Development Analyst

março de 2019 - setembro de 2019 (7 meses)

Londrina e Região

→ Developed, configured, tested, debugged, and maintained enterprise software used in telecommunications and wholesale operations.

→ Worked across backend services, databases, front-end applications, CI/CD, and technical documentation.

Technologies: Java • Python • PL/SQL • Spring • TypeScript • Angular • Jenkins

CSG International

Development Consultant

novembro de 2017 - março de 2019 (1 ano 5 meses)

Londrina Area, Brazil

→ Developed, configured, tested, debugged, and maintained enterprise software used in telecommunications and wholesale operations.

→ Worked across backend services, databases, front-end applications, CI/CD, and technical documentation.

Technologies: Java • Python • PL/SQL • Spring • TypeScript • Angular • Jenkins

Zoe Slots

Embedded Software Developer

setembro de 2017 - novembro de 2017 (3 meses)

Londrina Area, Brazil

→ Researched and developed embedded systems for the online-gaming industry.

→ Built C++ and Qt applications that integrated with microcontrollers and supporting software.

Technologies: C++ • Microcontrollers • Qt • Python • MySQL

LA2I - Laboratório de Automação e Instrumentação Inteligente
Software Developer
março de 2016 - março de 2017 (1 ano 1 mês)
Londrina Area, Brazil

→ Built energy-efficiency software that analyzed company electrical consumption and identified opportunities to reduce costs.

→ Developed the desktop application and data layer.

Technologies: Python • Qt • MySQL

Jirehmaq Automação Industrial
Automation Developer
janeiro de 2015 - março de 2016 (1 ano 3 meses)
Londrina Paraná

→ Developed control software for industrial automation equipment using microcontrollers.

→ Built machine-control interfaces for operators.

Technologies: C • C++ • Python • Java • Arduino • Raspberry Pi • Qt

Formação acadêmica

UEL - Universidade Estadual de Londrina
Bachelor of Engineering - BE, Electrical Engineering · (2011 - 2016)

Escola Técnica Estadual Conselheiro Antônio Prado
Technical Course, Chemistry · (2007 - 2009)
