Skills

- Real-Time Media & Streaming
- Distributed / Low-Level Systems
- WebRTC, SRT, gRPC, WebSockets
- GPU / CUDA, Video Processing
- Web3, Solidity, EVM, DeFi
- Agentic AI, RAG, MCP, LLMs
- AWS, Kubernetes, Docker
- English, Portuguese - Fluent
- Spanish - Adv., Italian - Interm.

Tools

Summary

Senior software engineer building **AI applications** – agentic workflows, long-term memory, and RAG pipelines – on top of 7+ years in distributed systems, real-time media, and low-level backend development in **Rust** and **Go**. I built **RoleMiner**, an AI job-discovery platform with persistent memory, and **Kioku**, an open-source memory layer for AI assistants with MCP integration. Earlier, at Cosm I built a GPU-accelerated real-time sports video player, and I delivered live-streaming infrastructure at FOX. My background also spans Web3 / DeFi smart contracts.

Experience

Nov 2025 - Present	AI Solutions Engineer (Independent)	Freelance / Consulting
	• Design and build AI applications, developer tools, and backend services in Rust and Python. • Built RoleMiner, a job-discovery platform with an LLM assistant, persistent user memory, structured job extraction, semantic search, and application tracking. • Built Kioku, an open-source memory layer for AI assistants with semantic retrieval, episodic memory, MCP integration, and long-term context. • Designed RAG and agent workflows covering retrieval, routing, context management, structured outputs, and evaluation. • Core technologies: Rust, Python, FastAPI, PostgreSQL, pgvector, Qdrant, LLMs, RAG, MCP, LangGraph.	
May 2025 - Present	Senior Rust & Go Engineer (Real-Time Media)	Kake @ Cosm
	• Built a GPU-accelerated web player in Rust for live sports production that ingests 8K fisheye video, corrects lens distortion, and delivers real-time playback. • Implemented virtual-camera views that automatically follow players or the ball across the field. • Designed backend services and media pipelines in Rust and Go for low-latency streaming, real-time processing, and distributed workloads. • Core technologies: Rust, Go, C++, CUDA, Python, TypeScript, WebRTC, SRT, gRPC, AWS, Kubernetes.	

Projects

• RoleMiner

AI job-discovery platform with persistent memory, semantic search, and application tracking.

[roleminer.app](#)

• Kioku

Open-source memory layer for AI assistants – semantic & episodic memory, MCP, long-term context.

[github.com/felipemeriga/kioku](#)

• Artemis Network

Open-source Rust project exploring blockchain protocols, decentralized networking, and distributed systems.

Experience

Mar 2021 -

May 2025

Senior Software Engineer (Live Streaming)

X-Team @ FOX

- Delivered backend infrastructure and real-time media systems for FOX's live-streaming platform – infrastructure, content distribution, and custom monitoring for live-streaming workloads.
- Built services in Go and Rust for real-time media processing, automation, and cloud infrastructure; implemented dynamic ad-insertion workflows for live broadcasts.
- Cut CPU and memory usage by more than 60% via profiling, heap analysis, tracing, and concurrency debugging; reduced the live-data validation loop from 6 minutes to 3 seconds.
- **Core technologies: Go, Rust, TypeScript, React, AWS, Kubernetes, WebRTC, SRT.**

Mar 2020 -

Mar 2021

Blockchain Software Engineer

Tokenizer

- Developed Ethereum smart contracts and backend integrations for DeFi and DEX products, using EVM tooling, RPC providers, and deployment workflows.
- Identified and mitigated performance and security vulnerabilities in smart contracts.
- **Core technologies: Solidity, Ethereum, EVM, Go, Rust, TypeScript, React, Docker, Kubernetes, AWS.**

Sep 2019 -

Mar 2021

Senior DevOps Engineer

Accenture (The Dock)

- Evaluated emerging technologies and designed cloud and deployment architectures for internal applications in Accenture's R&D center.
- **Core technologies: Go, Python, TypeScript, React, AWS, Terraform, Kubernetes, Docker.**

Earlier Experience

2018 - 2019

Software Developer

IO-Shower (Smart Shower)

Led end-to-end technical development of an IoT smart-shower product – embedded hardware, AWS IoT cloud architecture, backend APIs, and mobile apps. **C++, Java, React Native, AWS, IoT.**

2017 - 2019

Development Analyst / Consultant

CSG International & Tata Consultancy Services

Built and maintained enterprise software for telecom and wholesale operations across backend, databases, front-end, and CI/CD. **Java, Python, PL/SQL, Spring, Angular.**

2015 - 2017

Embedded / Automation Developer

Zoe Slots, LA2I & Jirehmaq

Built embedded systems for online gaming, energy-efficiency software, and industrial-automation control using microcontrollers. **C++, Qt, Python, Arduino, Raspberry Pi.**

Education

2011 - 2016

BEng., Electrical Engineering

State University of Londrina (UEL)

Londrina, Paraná, Brazil

Specialization: Embedded Software Development
